new HESTA blow moulding solutions

FlexLine

You have the mould.

We have the machine for it!

FlexLine

The Hesta machine that produces
using your stock moulds!

Our partners say

” We would love to have Hesta machines in our plant, but we have 30 old moulds with the customer-specific blow-mould equipment that we wouldn't want to replace with a whole new set-up. “

The solution

We develop solutions for your requirements. The result is the “FlexLine” series, which allows you to incorporate the blow-mould equipment from almost all machines of our competitors.

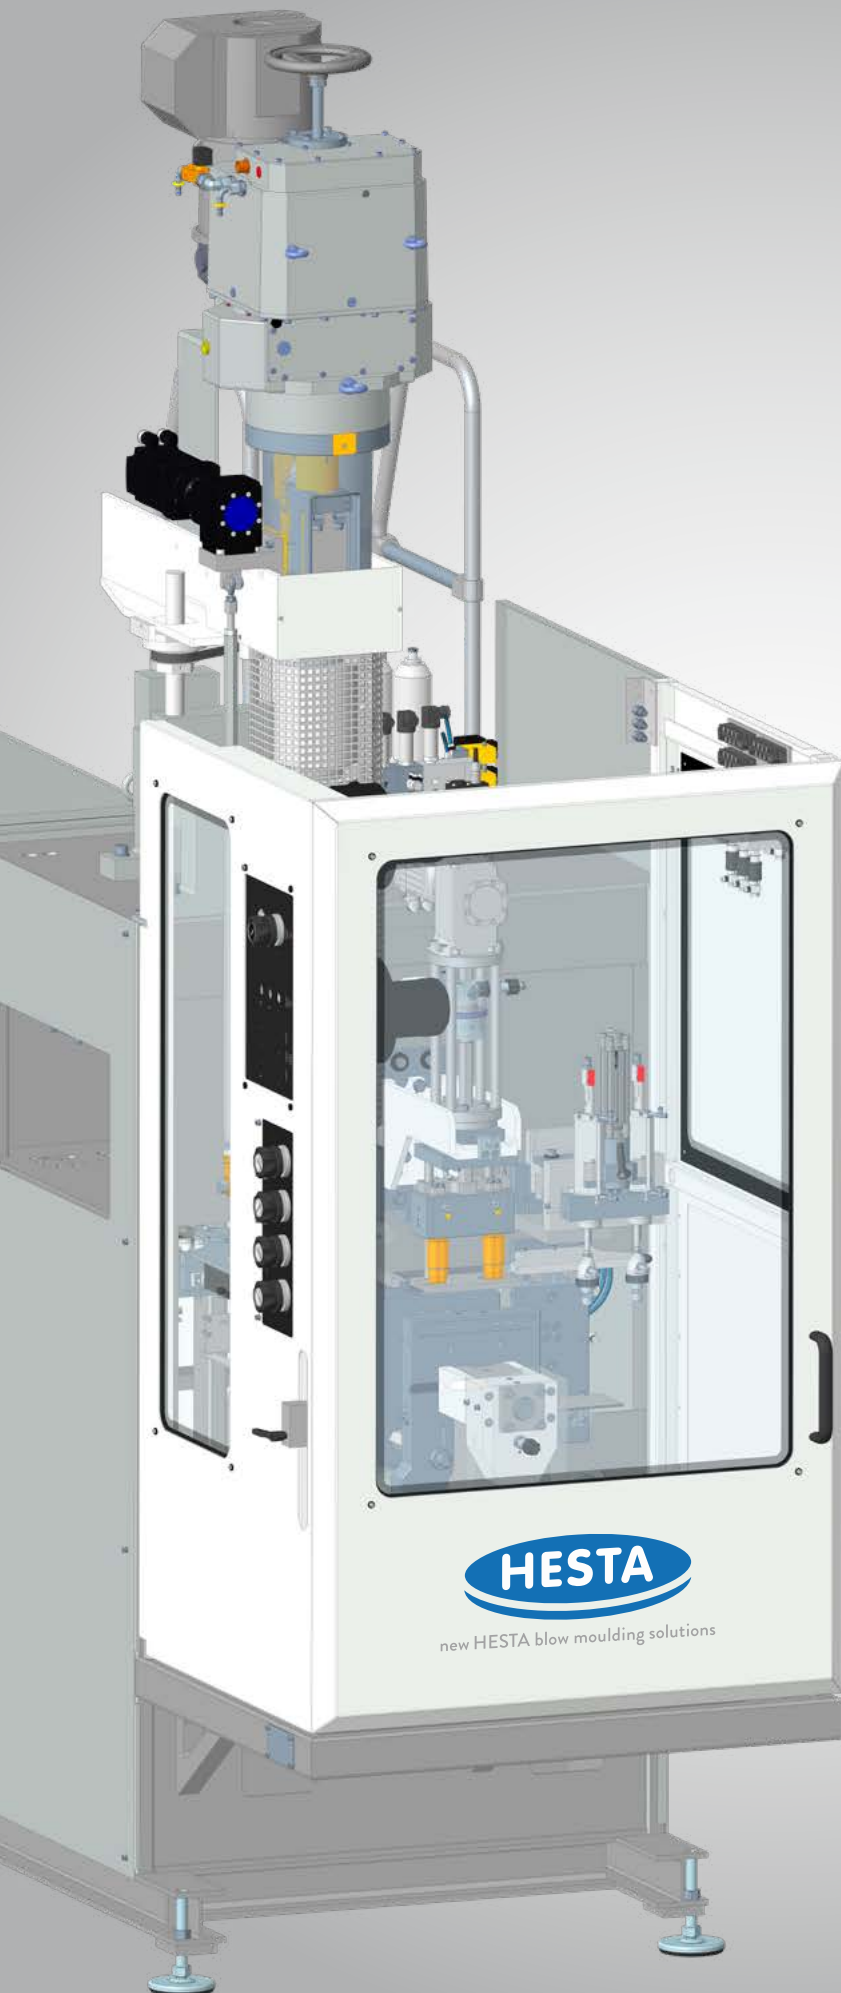

The following table illustrates which blow-mould dimensions the FlexLine variants of the familiar HV, HM and HG type series can accept.

Type series	HV-Flex	HM-Flex	HG-Flex
Linear mould stroke [mm]	up to 300	up to 435	up to 560
Mould width [mm]	320	455	580
Mould height [mm]	Max.: 300/330	Max.: 395	Max.: 580
Mould thickness [mm]	Min.: 2x55 Max.: 2x100	Min.: 2x85 Max.: 2x130	Min.: 2x85 Max.: 2x180
Clamping force [kN]	up to 40	up to 100	up to 180
Cavities with centre distance 125 mm	2-fold	3-fold	4-fold

new HESTA blow moulding solutions

NEW: 1-litre-machine

With the HV-Flex, we can now offer you a 1-litre machine in the HV type series. This represents a real benchmark, both technically and in terms of price.

Further innovations

- Automation with integrated 100% quality control and stacking in transport bundles
- Spiral mandrel parison die for A-B-A and PCR applications
